**VOLUME XII – NUMBER 20
Friday, March 14, 2003**

**UNITED STATES DEPARTMENT OF AGRICULTURE
AGRICULTURAL MARKETING SERVICE
FRUIT and VEGETABLE PROGRAMS, MARKET NEWS BRANCH**

PREFACE

This report is produced by the United States Department of Agriculture with the cooperation of Agriculture Canada and Servicio Nacional de Informacion de Mercados of Mexico. It is published twice weekly and includes preliminary import volume data which is subject to correction as final data are received. Prices as shown for Bulgaria, Canada, Colombia, England, France, Germany, Japan, Mexico, The Netherlands and Poland are converted to U.S. currency, based upon the published New York foreign exchange rate as quoted at 3 p.m. Eastern Time on the date of the information shown.

The preliminary volume data as shown in the shipment, border crossings and import section are by commodities and origins on a crop season basis. Seasons commence with the first shipments of a new crop with most commodities having a different shipping period per origin. For additional information or a subscription notice, contact the following office.

The U.S. Department of Agriculture's Agricultural Marketing Service is not responsible for the accuracy of the Foreign Wholesale Markets contained in this report. The Agricultural Marketing Service does believe that the sources of this price data, both government and non-government agencies, have the most reliable and complete information available. These reports are included as a service to provide as many Foreign Wholesale Markets as possible to users of The International Report.

COMMODITY HIGHLIGHTS

MEXICAN TRENDS

For the week of March 3 - 7, 2003

CITRUS FRUITS

Limes

During this present cycle and on a national level, production of Mexican limes has been even lower given the fact that harvesting in Colima and Oaxaca tends to be at its lowest during the winter, and Michoacan has basically been the primary wholesale supplier to the entire country since the end of last year. Normally, during the middle of February, crops in the first two regions start to improve again, which up until the present doesn't appear to be the case on account of delays. This has been further aggravated by the fact that within the past few weeks, production in Michoacan has started to decline. As a result of all this, the price has risen significantly, reaching a level that is very high, and is probably the highest recorded in the past ten years. This, in turn, has reduced the demand which is likely to prompt the price to remain somewhat stable, yet high, throughout the next coming week.

While not quite as scarce, supplies of Persian limes are still limited and Martinez de la Torre, Veracruz happens to be exporting significant volumes to foreign markets. This, coupled with the pressure exerted by the other variety, has caused the price of Persian limes to rise to a level that is high, yet it still happens to be more affordable than its counterpart. During the next fifteen days, the price of this variety is expected to behave similarly to that of the Mexican kind.

Oranges

Volumes of the late crop of oranges being obtained in Veracruz are noticeably lower than they were a year ago. This, coupled with the fact that juice concentrate packagers have increased their demand, has reduced supplies. Consequently, the price has risen, reaching a level that now happens to be higher than it was a year ago and no significant changes are expected to be noted within the next fifteen days given the fact that harvesting in that region is still at its peak. This forecast actually depends on whether the higher temperatures cause consumption to increase.

MELONS

Cantaloupes

Supplies of Cantaloupe melons aren't all that ample given the fact that production in Altamirano, Guerrero has yielded comparatively lower volumes than that of previous years, particularly smaller-sized ones. Because of this, the price has risen and will probably remain this way throughout the next coming week now that consumption is rising on account of the heat wave. Volumes from this region aren't expected to increase, while harvesting in Oaxaca has recently ended and production in Colima appears to be virtually insignificant.

Watermelons

Supplies of Sangria watermelons aren't all that abundant at the moment because production in Tabasco has yielded lower volumes than originally expected and harvesting in that region is now in its low phase. In general, supplies have been consistent now that Campeche is shipping higher volumes, allowing the price to remain somewhat stable and it will probably stay this way throughout the next two weeks if shipments from both these regions continue arriving regularly.

NON-CITRUS FRUITS

Apples

During long stretches of time, the price of prime quality apples tend to remain stable on account of the fact that the bulk of the fruit comes from refrigerated storage facilities in Chihuahua, allowing distributors to regulate supplies. Chihuahua's crops of apples didn't yield volumes as high as expected and imported volumes are comparatively lower, which is why prices have tended to be higher this year. Domestic supplies of apples are dwindling and within the next two weeks imported apples will start to predominate in the marketplace which is why prices are likely to rise imminently.

Avocados

Supplies of Hass avocados are satisfactory and harvesting in Michoacan is still at its peak, as it usually is between the months of November through March. Unusually high temperatures are accelerating the maturation of the fruit, however, which could induce growers to increase volumes shipped to markets and force the price to remain somewhat stable, as it has been throughout the past few weeks.

Bananas

In general, supplies of bananas, commonly known as the Tabasco variety, are limited due to the fact that production in Chiapas and Tabasco is in its low phase, as it usually is during the winter and the ensuing drought period. Despite all this, the price has dropped within the past two weeks due to the fact that recent high temperatures have accelerated the maturation of the fruit and higher volumes of ripe ones happen to be available. The price is still rather high and will probably drop again within the next coming week.

With respect to Macho plantains, supplies of ripe ones have also improved and shipments from Chiapas and Ribera del Papaloapan have been consistent, prompting the price to drop slightly and reach a level that is now low. It will probably remain somewhat stable during the next two weeks.

Papayas

Since the beginning of February, production of Maradol papayas has started to improve, reaching its peak phase. Consequently, supplies have increased, prompting a slight reduction in the price, and reaching a level that is low and inferior to what it was a year ago. During the next fifteen days, quantities shipped from that region are expected to be similar, however, the recent heat wave also appears to be increasing the demand, which is why the price probably won't drop again.

Pineapples

During the past three weeks, the price of pineapples has dropped due to a slight improvement noted in the supply given the fact that weather has recently improved in Villa Isla, Veracruz. Furthermore, because growers had problems transporting a few weeks ago, supplies now consist of the ones that were delayed and stored. Although the price has dropped, it still happens to be high since overall supply levels are lower due to the fact that less crop surface was sowed. This, coupled with the recent rises in temperature throughout the City of Mexico, is prompting demand for this fruit to rise, and is likely to make the price remain somewhat stable, or perhaps even rise within the next coming week.

VEGETABLES

Carrots

As predicted, supplies of carrots still happen to be scarce, particularly those of the good quality ones. This is because production in Celaya, Guanajuato has yielded lower volumes in comparison to previous years. Because of this, even though the prices have dropped slightly, they still happen to be high. They are likely to remain somewhat stable during the next two weeks, however, since some volumes are coming from Puebla, and because they happen to be poorer in quality, they are priced lower.

Pepper

After three weeks of continuous lows, the price of prime quality Serrano peppers rose slightly as a result of the fact that growers in Sinaloa and Tamaulipas have reduced their shipments to avoid further reductions. Despite all this, supplies, in general, still happen to be satisfactory with significant volumes coming from both those regions, along with some lower quantities also coming from Nayarit. Even though the price has risen, it still happens to be affordable and lower than it was a year ago, with no significant changes likely to be noted within the next fifteen days.

With respect to Poblano peppers, a modest increase was also noted in the price and this is due to the rise in consumer demand commonly attributed to the start of Lent (holy festivities). Despite all this, the price still happens to be affordable given the fact that supplies are satisfactory and significant volumes coming from Sinaloa, along with some that are coming from Jalisco. During the next two weeks, production in the first region is likely to yield significant volumes which is why the price will probably remain somewhat stable.

As for Jalapeño peppers, volumes being supplied happen to be satisfactory with consistent shipments coming from Sinaloa along with batches that are coming from Tamaulipas, Jalisco, and more recently, from Nayarit, as well. This has prompted the price to drop slightly, reaching a level that is low, and it will probably remain this way throughout the next two weeks given the fact that shipments, particularly from the first region, are likely to be consistent.

Squash (Zucchini)

As expected, harvesting of zucchini has improved slightly in Hidalgo, while some quantities are also coming from Morelos, and more recently, from Puebla, allowing overall supplies to increase slightly and prompting the price to start dropping. It has reached a level that is low and will probably remain this way throughout the next two weeks, particularly if shipments from these regions continue to arrive regularly.

Tomato

Supplies of Saladette tomatoes are sufficient given the fact that the second phase of production has now started in Sinaloa. Nevertheless, supplies of the good quality ones happen to be limited because of deterioration caused by rains that fell recently, as well as increases in volumes being exported from that region. The prices haven't varied all that much, but have risen, and that of the better quality ones may rise again during the next coming week, although only slightly, since poorer quality ones, as well as some that are coming from Nayarit, happen to be readily available and priced lower.

Similarly, increases in the volumes of vineripe tomatoes being exported during the past two weeks, particularly of the good product, has prompted a slight rise in the price. Considerable volumes will likely continue being exported to foreign markets during the next coming week which is why the price will probably remain somewhat high.

ONIONS AND POTATOES

Onions

For the fifth consecutive week, the price of white onions has dropped again due to a slight improvement noted in the supply now that Morelos is the primary supplier, along with Guanajuato and Tamaulipas, which are supplying some lower quantities. The price has reached an affordable level although it still happens to be higher than it was a year ago when volumes were more abundant. If these regions ship similar quantities within the next two weeks, the price will probably fluctuate around its present low level, particularly since the demand doesn't happen to be all that high at the moment.

Potatoes (White)

For the third consecutive week, shipments of white potatoes have increased given the fact that harvesting in Los Mochis, Sinaloa has reached its peak, prompting the price to start falling, and reaching a level that now happens to be lower than it was a year ago. Reports indicate that the northern states are starting to demand considerable volumes of this product, which could cause supplies to decrease during the next two weeks, causing the price to either remain stable, or even rise slightly.
